

American International School

Chennai, India

Elementary Play Area

Full design & build of children's play area adhering to critical fall height standards.

Date of Project Completion: July 2014

Base Construction: Plain Cement Concrete

Surface/s: Tiger Pad + Summer Envy 35

The client's vision for the project was to secure the safety of the Elementary Students without compromising on fun in learning environments.

The new facility has given 500 plus students a breath of fresh air and a comfortable, safe play area with world-class standards at par anywhere in the international school eco system.

It has given a new outlook to the elementary school and has elevated the facility to a whole new different level. Having a non-slushy 'green play area' which conforms to stringent fall height compliance as per play equipment and fall height, ensures that the child can literally 'run and play free'.

The play area was divided into 3 zones, each with a different fall height criteria - which meant that the thickness of the pad would vary from 90mm to 45mm to 10mm. Not only that, the top surface of the turf had to be flush in all 3 zones so that it would appear as one seamless unit without any trip hazard. Furthermore there were over 130 foundations that had to be grouted to fix the play equipment.

No watering or mowing is required and the reason for allergy causing grass-seeds is also negated with, with our all-weather, synthetic grass that is lush and green 24x7.

In the words of a child "this is even better than Disneyland".
