## The Kalyani School

Pune, Maharashtra, India

Full design, manufacture and installation of a multi-sports facility with tufted line markings for football, volleyball and badminton along with a 6-lane running track, cricket wicket and basketball.

Date of Project Completion: February 2018

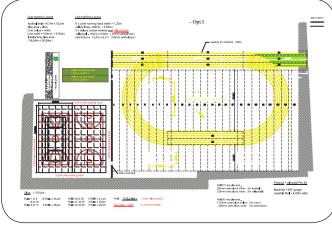

**Surface:** Ultimate Pro 40 for football, volleyball, badminton and running tracks, Deluxe for cricket wicket and double-layered PP Interlocking Tiles for basketball

**Base:** Crushed rock base for football, volleyball, badminton and running tracks and plain cement concrete base for cricket and basketball

The Kalyani School, constantly rated as amongst the top 5 schools in India over the last ten years, envisioned to provide its students a harmonious and stimulating learning environment that would inspire them to bring out their best, both in the classroom and on the play field. The management realized the need of a dedicated sports facility that would stimulate L.I.F.E. – "learning in fun environment" and be the life space of the school, also providing the children a controlled and safe environment to explore, learn, develop and grow.

The challenge to transform a muddy and uneven playground into a secure and world-class environment was successfully met by team Altius, in conjunction with the school management, right from the conception stage itself. Our CAD team helped the client envisage the final picture of the finished facility; our project team assisted in supervision of a correctly engineered field and the final installation was yet another jewel in the school's crown, high not just in performance, but warranty as well.

The facility utilises the TigerTurf Ultimate Pro 40 that uses yarn technology to provide the "ultimate" combination of advanced performance and durability. The fibre has been developed keeping in mind the constant wear and tear. It's unique construction makes for a durable grass fibre with resilience, increased comfort and safety as its prime attributes.

The ECB certified TigerTurf Deluxe cricket wicket was ideally placed in the middle ofthe ground and has been engineered in such a manner that the player gets both ball bounce and ball turn. It is hard-wearing, all-weather and highly durable.

The FIBA approved interlocking tiles for basketball courts are constructed of a

double polypropylene layer with specially designed tiles for water drainage.

Here's to our "love of the sport"!
