

American International School, Chennai

Chennai, Tamil Nadu

Complete design, build & install of a sandwich track system along with sprint as well as a natural football field in the middle.

Date of Project Completion : August 2018

Surface: IAAF approved Eltan S/E (Sandwich System)

Base Construction: Asphalt

Size: 300 mtrs.

The American International School Chennai (AISC) is the hallmark when it comes to education, infrastructure and an all-round development for school-going kids in India. It's facilities, both in and out of the classroom, are state-of-the-art and their endeavour is to give the best to their students with the best that is available in the world.

Their regular natural grass field was being used extensively not just for football, but for athletics as well. To further grow the talent and make their students compete on the international platform, AISC decided that they needed a professional track on which the students could train and compete on the international arena. Without taking away the integrity of the football field, Altius Sports designed a track system that is second to none in India.

The base was constructed of asphalt, keeping in mind the planarity that is exceedingly critical for such surfaces. A drain was given between the football field and the track so that no water would spill over. In fact, the 2 naturals Ds even has a sub-soil construction so that the water catchment was such that there would be no flooding.

The entire components were imported from Europe and every element making up the track system was free of TDI, chlorinated hydrocarbons and any other heavy metals. Our meticulous overseas installation team ensured a world-class system was laid including the line marking and accessories supplied to ensure a complete track facility.
